Assignment:11

Divyae Vats

Roll No. : 140123049

April 26th, 2016

Question 1(a): The Code to implement this Question is as follows:

R Code

```
1
2 for(i in 1:25){
3   p=NULL;
4   res <- 0;
5   num=i;
6   for(j in 1:5){
7     p[j]=num%%2;
8     num=num%%2;
9   }
10  for(k in 1:5){
11    res=res+p[k]*2^(-k);
12  }
13  cat(res, " ");
14 }
```

The Output of this code gives:

0.5 , 0.25 , 0.75 , 0.125 , 0.625 , 0.375 , 0.875 , 0.0625 , 0.5625 , 0.3125 , 0.8125 , 0.1875 , 0.6875 , 0.4375 ,
0.9375 , 0.03125 , 0.53125 , 0.28125 , 0.78125 , 0.15625 , 0.65625 , 0.40625 , 0.90625 , 0.09375 , 0.59375.

Question 1(b): The Code to implement this Question is as follows:

R Code

```
1
2 seq=NULL;
3 for(i in 1:1000){
4   p=NULL;
5   res <- 0;
6   num=i;
7   for(j in 1:11){
8     p[j]=num%%2;
9     num=num%%2;
10  }
11  for(k in 1:11){
12    res=res+p[k]*2^(-k);
13  }
14  seq[i]=res;
15 }
16 #Making 2-D pairs.
17 seq2=NULL;
18 for(s in 1:999){
19   seq2[s]=seq[s+1];
20 }
21 #Finding the overlapping values and plotting.
22
23 overl1=NULL;
24 overl2=NULL;
25 m <- 0;
26 for(q in 2:999){
27   cor1 <- seq[q];
28   cor2 <- seq2[q];
29   for(r in 2:q-1){
30     n1=seq[r];
31     n2=seq2[r];
32     if((cor1==n1) & (cor2==n2)){
33       m=m+1;
34       overl1[m]=cor1;
35       overl2[m]=cor2;
36       break;
37     }
38   }
39 }
40 pk=c(0,1);
41 plot(overl1,overl2, xlim=pk, ylim=pk);
```

We observe that there are no values in the plot which shows that none of the sequence of values overlaps with each other.

Question 1(c): The Code to implement this Question is as follows:

R Code

```
1
2 seq=NULL;
3 for(i in 1:101){
4   p=NULL;
5   res <- 0;
6   num=i;
7   for(j in 1:8){
8     p[j]=num%%2;
9     num=num%%2;
10  }
11  for(k in 1:8){
12    res=res+p[k]*2^(-k);
13  }
14  seq[i]=res;
15 }
16 #Making 2-D pairs.
17 seq2=NULL;
18 for(s in 1:100){
19   seq2[s]=seq[s+1];
20 }
21 length(seq) <- 100;
22
23 pk=c(0,1);
24 plot(seq,seq2, xlim=pk, ylim=pk);
```

Question 1(d): The Code to implement this Question is as follows:

R Code

```
1
2 seq=NULL;
3 for(i in 1:100001){
4   p=NULL;
5   res <- 0;
6   num=i;
7   for(j in 1:18){
8     p[j]=num%%2;
9     num=num%%2;
10  }
11  for(k in 1:18){
12    res=res+p[k]*2^(-k);
13  }
14  seq[i]=res;
15 }
16 #Making 2-D pairs.
17 seq2=NULL;
18 for(s in 1:100000){
19   seq2[s]=seq[s+1];
20 }
21 length(seq) <- 100000;
22
23 pk=c(0,1);
24 plot(seq,seq2, xlim=pk, ylim=pk);
```

Question 1(e): The Code to implement this Question is as follows:

R Code

```
1
2 a <- 1229;
3 b <- 1;
4 m <- 2048;
5 x <- 0;
6 x <- (a*x+b)%m;
7 u <- x/m;
8 Cor1=NULL;
9 Cor2=NULL;
10
11 for(i in 1:100)
12 {
13   x <- (a*x+b)%m;
14   Cor1[i]=u;
15   u <- x/m;
16   Cor2[i] <- u;
17 }
18
19
20 seq=NULL;
21 for(i in 1:101){
22   p=NULL;
23   res <- 0;
24   num=i;
25   for(j in 1:8){
26     p[j]=num%%2;
27     num=num%%2;
28   }
29   for(k in 1:8){
30     res=res+p[k]*2^(-k);
31   }
32   seq[i]=res;
33 }
34 #Making 2-D pairs.
35 seq2=NULL;
36 for(s in 1:100){
37   seq2[s]=seq[s+1];
38 }
39 length(seq) <- 100;
40
41 pk=c(0,1);
42
43 old.par <- par(mfrow=c(1, 2));
```

```

44 plot(Cor1, Cor2, main="LCG:a=1229,b=1,m=2048");
45 plot(seq, seq2, main="Van der Corput");
46 par(old.par);

```

Question 1(f): The Code to implement this Question is as follows:

R Code

```
1
2 a <- 1229;
3 b <- 1;
4 m <- 2048;
5 x <- 0;
6 x <- (a*x+b)%m;
7 u <- x/m;
8 Cor1=NULL;
9 Cor2=NULL;
10
11 for(i in 1:100000)
12 {
13   x <- (a*x+b)%m;
14   Cor1[i]=u;
15   u <- x/m;
16   Cor2[i] <- u;
17 }
18
19
20 seq=NULL;
21 for(i in 1:100001){
22   p=NULL;
23   res <- 0;
24   num=i;
25   for(j in 1:18){
26     p[j]=num%%2;
27     num=num%%2;
28   }
29   for(k in 1:18){
30     res=res+p[k]*2^(-k);
31   }
32   seq[i]=res;
33 }
34 #Making 2-D pairs.
35 seq2=NULL;
36 for(s in 1:100000){
37   seq2[s]=seq[s+1];
38 }
39 length(seq) <- 100000;
40
41 pk=c(0,1);
42
43 old.par <- par(mfrow=c(1, 2));
```

```

44 plot(Cor1, Cor2, main="LCG:a=1229,b=1,m=2048");
45 plot(seq, seq2, main="Van der Corput");
46 par(old.par);

```

Question 2(a): The Code to implement this Question is as follows:

R Code

```
1
2 seq=NULL;
3 for(i in 1:100){
4   p=NULL;
5   res <- 0;
6   num=i;
7   for(j in 1:8){
8     p[j]=num%%2;
9     num=num%%2;
10  }
11  for(k in 1:8){
12    res=res+p[k]*2^(-k);
13  }
14  seq[i]=res;
15 }
16 seq2=NULL;
17 for(i in 1:100){
18   p=NULL;
19   res <- 0;
20   num=i;
21   for(j in 1:5){
22     p[j]=num%%3;
23     num=num%%3;
24   }
25   for(k in 1:5){
26     res=res+p[k]*3^(-k);
27   }
28   seq2[i]=res;
29 }
30 plot(seq,seq2);
```

Question 2(b): The Code to implement this Question is as follows:

R Code

```
1
2 seq=NULL;
3 for(i in 1:100000){
4   p=NULL;
5   res <- 0;
6   num=i;
7   for(j in 1:18){
8     p[j]=num%%2;
9     num=num%%2;
10  }
11  for(k in 1:18){
12    res=res+p[k]*2^(-k);
13  }
14  seq[i]=res;
15 }
16 seq2=NULL;
17 for(i in 1:100000){
18   p=NULL;
19   res <- 0;
20   num=i;
21   for(j in 1:11){
22     p[j]=num%%3;
23     num=num%%3;
24   }
25   for(k in 1:11){
26     res=res+p[k]*3^(-k);
27   }
28   seq2[i]=res;
29 }
30 plot(seq,seq2);
```

We observe that Halton Sequence is uniformly distributed in the Real plane. The Generated sequence of 2-tuples are uniformly distributed all throughout $[0,1] \times [0,1]$.
